

IGNACIO JAVIER DIAZ PACCE

Technical Product Manager | IoT & MedTech | Hardware to Mobile

Buenos Aires, Argentina · +54 3777 473006 · ignaciодiazpacce6@gmail.com · linkedin.com/in/ignaciодiazpacce

PROFESSIONAL SUMMARY

Electronics engineer focused on developing products that integrate hardware, firmware, and software, with a comprehensive lifecycle view and a focus on process optimization. Experience building systems that connect real devices with applications, prioritizing maintainable, scalable solutions with concrete impact on operations and business. Interested in accessibility and usability, designing clear and consistent interfaces across different contexts.

WORK EXPERIENCE

Product Engineer Nov 2024 – Present

Electromedicina Morales S.R.L. — Buenos Aires

Part of the design and development team for veterinary biomedical devices, spanning hardware, firmware, mobile software, and production optimization.

Hardware Development

- Collaborated on the design and development of PCBs for a veterinary electrocardiograph.
- Upgrade and redesign of PCBs for existing catalog products.

Software Development

- Drove the design and development of a Flutter app that integrates, as its first device, a veterinary electrocardiograph, with the vision of connecting multiple devices from a single interface. The hub-type architecture lays the foundation to scale toward clinical patient traceability (iOS/Android).

Firmware

- STM32 firmware for a veterinary electrocardiograph. Migration from 1 to 3 channels for greater diagnostic capability.
- Corrective and evolutionary maintenance of existing catalog firmware.

Process & Production Optimization

- Drove automation of technical documentation
- Drove outsourcing of PCBA manufacturing
- Reactivated use of project management tools (Redmine)

- Procurement management for the development area
- Implemented document organization system

Design, Development & Production Manager Apr 2022 – Oct 2024

StandFit Equipment — Goya, Corrientes

Built the operational infrastructure of a fitness equipment company from the ground up: product design, production processes, inventory, and control systems.

- Managed a portfolio of 30+ fitness equipment models, with original design and redesign based on customer feedback (Voice of Customer).
- Designed a 6-station production layout. Tripled production capacity from 1–2 to 6 machines/month with the same headcount.
- Led and trained a team of 4 people with no prior experience, progressively delegating daily coordination to an operational team lead.
- Implemented digitized barcode inventory (100+ SKUs), replacing manual paper-based control.
- Developed from scratch: production orders, BOM costing, purchase planning, account control, and preventive maintenance.
- Cut component costs by over 100% by replacing machining with additive manufacturing (3D printing).

PCB Designer (Professional Internship) Dec 2021 – Mar 2022

Voltu Motor Inc. — Paraná, Entre Ríos

- Design of electronic boards for BMS testing in electric mobility. Electrical validation and 3D modeling.

PERSONAL PROJECTS

- End-to-end design and development of equipment for virtual mesotherapy. From product concept through hardware and firmware.
- Personal organization app of my own (tasks, habits, notifications), with its own authentication, database, and deployment — in active use.
- Management platform for a healthcare professional and their patients (appointments, push and email reminders), in active cooperative development alongside a nutritionist as a real business user — continuous product iteration based on feedback from an external professional use case.

EDUCATION

Electronics Engineer 2016 – 2023

Universidad Nacional del Nordeste (UNNE) — Corrientes

- GER Scholar: control in grid-connected photovoltaic systems (2021–2022). Teaching Assistant, Electrotechnics II (2021).

Additional: Technical English (UNNE) · Public Speaking (UNNE) · Project Management & SysML (in progress, Udemy)

| TECHNICAL SKILLS

Firmware & Embedded: Embedded C (STM32 ARM Cortex-M, ATmega328P), FreeRTOS, UART, SPI, I2C, BLE

Mobile & Web Development: Flutter/Dart, Android Studio, React, Vite, Tailwind CSS

Electronics Design: KiCad (advanced), Proteus, LTspice, MultiSim

3D Modeling: Fusion 360, SolidWorks, Cura, OrcaSlicer, 3D printing

Automation: Python, Google Apps Script, Node.js, Google Sheets API

Tools: Git, Bitbucket, GitHub, Redmine, Matlab, Simulink, Google Workspace, MS Office (Microsoft 365), Vercel

| MANAGEMENT SKILLS

Team leadership · Cross-functional coordination · Stakeholder management · Continuous improvement · Production planning · Change Management · Technical documentation · Supply chain · BOM costing · Ownership

| LANGUAGES & ADDITIONAL INFO

Spanish Native · **English** Intermediate, actively training – B1

Availability: Remote, hybrid
